

## Ex. 0.5

The output is

```
21  
b is odd  
Something bad just happened
```

## Ex. 0.13

With the new line character removed, the output it is

```
Hello World!%
```

As in Java's function **System.out.print**, in the C function **printf**, the new line character moves the cursor to the new line after printing the string.
